

# Yhoan Alejandro Guzmán García

## Consultant, Software Development

I'm a Software Engineer passionate about leveraging technology to create real-world impact. I enjoy solving complex business problems through collaboration.

I'm a curious tech enthusiast, which has led me to work in different branches of development, mainly **Backend, Infrastructure, Data Engineering/Analysis, Mobile (Flutter)**, and most recently **Frontend**. I have worked in projects starting from scratch (building the code and infrastructure from the ground up) and I have also worked in projects in late stages with bigger teams.
